Hosted PBX: ATT's hosted PBX (telephony system) installed within our already extensive SIP trunking platform

A hosted carrier may have the best list of features at the most attractive price; but our experience over the last few years suggests that the two most important aspects of hosting voice applications are:

a) **Connectivity:** If the connection from your offices to the hosted application is not up to the required standard the application will not work.

b) **Core application**: Replicating the hosted application is paramount. AT Telecommunications Ltd.'s core voice application is spread between 3 data centres in and around London and we have no single point of failure within the application.

ATT hosted PBX

ATT: This is a hosted telephony application installed within our already extensive SIP trunking platform. ATT Hosted PBX has all the features demanded by the market with a compact easy to use.

Licences: Are per user and not per device enabling you to use the device you want, when you want and where you want, i.e. hardwired phone or PC software client at your desk, mobile phone, or iPad (Wi-Fi connected) anywhere in the world. You will never miss a business call again.

Phones and software: We will recommend Phones and software as per your needs.

Connectivity: Is paramount to the success of deploying a hosted application no matter if it's for a single user or SME client. AT Telecommunications Ltd has partnered with providers who have a long reputable history for supplying data connectivity for voice applications. If the connectivity profile doesn't fit we won't be supplying the application.

Number Porting: We will process your number ports on your behalf and save you stress

Number Provision: AT Telecommunications Ltd have an extensive range of UK numbers covering 90% of the UK we can also provide international numbers.

What is included in each licence: Every supplier has a different approach on pricing and pricing options; we have strived to provide very cost effective pricing structure. There are applications which will not be required by every user that use resource.

Features Included:
- All standard telephony features
